ACKNOWLEDGEMENT

Initially, I thank the Almighty for being with me through every walk of my life and showering His blessings throughout this endeavour to put forth this report. My sincere thanks to our Chairman **Mr. S. MEGANATHAN, B.E., F.I.E.**, our Vice Chairman **Mr. ABHAY SHANKAR MEGANATHAN, B.E., M.S.**, and our respected Chairperson **Dr. (Mrs.) THANGAM MEGANATHAN, Ph.D.**, for providing us with the requisite infrastructure and sincere endeavour in educating us in their premier institution.

My sincere thanks to **Dr. S.N. MURUGESAN, M.E., Ph.D.**, our beloved Principal, for his kind support and the facilities provided to complete my work in time. I express my sincere thanks to **Dr. VINODHKUMAR S, Ph.D.**, Professor and Head of the Department of Computer Science and Design, for his guidance and encouragement throughout the project work. I convey my sincere and deepest gratitude to my internal guide, **Dr. GUNASEKAR S**, Department of Computer Science and Design, Rajalakshmi Engineering College, for his valuable guidance throughout the course of the project.

SAM SUNDAR R (231701046)

CHAPTER 1

INTRODUCTION

1.1 About the Film

“5 MORE MINUTES” is a 3-minute short drama that explores procrastination and the way small delays can quietly turn into a big waste of time. The film follows a young man who sits down at his desk at around 7:00 PM with the intention of finishing his work on his laptop. When his phone vibrates, he tells himself that a short look will not do any harm.

What begins as a few minutes of scrolling gradually stretches across the evening. By the time he looks at the clock again, it is 9:00 PM and his work is still unfinished. After seeing how much time he has spent on his phone, he realizes what has happened, switches the phone off, puts it inside a drawer, and returns to his work with full focus. He completes the task and ends the day feeling satisfied.

The film uses a single on-screen actor, a single location (a house), and no dialogue. The story is told through close-ups of a clock, the laptop, the phone and the actor’s hands, along with facial expressions, quick cuts, and simple on-screen text at the end. The film shows how easily a person can lose track of time to a phone, even when there is important work waiting.

1.2 Background

The idea for “5 MORE MINUTES” comes from a very common everyday habit: telling oneself “just five more minutes” while using a phone. Almost every student and working professional has experienced a moment when a short break from work became a long distraction. The film presents this familiar experience through one evening of work at a desk.

The project was designed as a no-dialogue, single-actor short film that could be produced within one house and with easily available equipment. The storytelling depends on visual elements such as the clock showing different times, the phone vibrating on the desk, the actor’s hesitation, the close-up of a scrolling thumb, and the laptop screen showing unfinished work. The clock acts as the main storytelling

device, since each time shown (7:00, 7:05, 7:30, 8:00, 8:30 and 9:00 PM) tells the audience how much time has been lost without any spoken explanation.

The main objective of the project is to gain practical experience in developing a short narrative from an original idea and presenting it effectively within a limited duration of three minutes. The project also provides experience in screenplay writing, shot planning, acting, cinematography, sound design, editing, and visual storytelling.

1.3 Theme and Message

The central theme of “5 MORE MINUTES” is procrastination caused by digital distraction. The film shows how a phone can pull a person away from important work through small, harmless-looking moments that quietly add up to hours. The film moves through three key stages. In the first stage, the protagonist is focused and determined. In the second, he gives in to a small distraction and then justifies it as “just five more minutes.” In the third, he faces the consequences when the clock shows 9:00 PM and his work is still unfinished. His decision to switch off the phone and put it away marks the turning point of the story.

The moral of the film is: **“Small delays can become a big waste of time.”** This idea is delivered at the end through three on-screen messages: “Five minutes doesn’t feel like much.”, “Until those five minutes become hours.”, and “Don’t waste time waiting for later.”

The film presents its message not through dialogue or lecture, but through the passing of time, the actor’s expressions, and the contrast between the wasted evening and the short, focused effort that finally completes the work.

CHAPTER 2

STORY & CHARACTERS

2.1 Story Synopsis

“5 MORE MINUTES” follows a young man who enters his room at around 7:00 PM, sits at his desk, opens his laptop, and starts working seriously. The film establishes his focus through close-ups of the clock, his hands typing, and the work shown briefly on the laptop screen. Soon, his phone vibrates on the table. He looks at it, then at the laptop, and then back at the phone. After some hesitation, he picks it up and begins scrolling. When the clock shows 7:05 PM, he realizes the time, puts the phone down, and returns to work. The distraction returns. He looks at his phone again, picks it up, and continues scrolling, with a close-up of his thumb moving on the screen. By the time the clock shows 7:30 PM, he realizes that time has passed and puts the phone down once more.

A series of quick cuts then shows time passing: the clock at 8:00 PM with the actor using his phone, the clock at 8:30 PM with the actor still distracted, and the clock at 9:00 PM. He finally looks at his laptop and finds that the work is still unfinished. He looks frustrated and glances from the clock to the phone and to the laptop.

He then opens the screen-time information on his phone and is shocked by how much time he has spent on it. Looking again at the unfinished work, he slowly realizes what has happened. He switches the phone off, places it inside a drawer, and sits down to work again. With complete focus, he finishes the remaining work and saves it. The film ends with the actor closing the laptop, leaning back, and taking a satisfied breath while the camera slowly moves away from him. The closing text messages appear on the screen, followed by a fade out.

2.2 Main Characters

Name	Role
Badrish R S	Actor
Sam sundar	Cameraman
Sam sundar	Director & Writer

The film has a single on-screen character, the protagonist, who is presented as an ordinary young person trying to complete his work at home. He is not given a name or any dialogue, which allows the audience to see him as a reflection of themselves.

2.3 Character Development

The protagonist is the only character in the film, and his emotional state changes gradually as the story moves forward. At the beginning, he is calm, serious, and determined. He enters the room, sits down, opens the laptop, and starts working without wasting any time. The first vibration of the phone tests his focus. His hesitation, shown by looking from the laptop to the phone and back, reveals that he is aware of the work waiting for him but is still tempted. When he picks up the phone, the audience sees that his determination is weaker than his habit.

After each distraction, he realizes the time, feels slightly guilty, and returns to work. However, the second distraction is longer and more careless, as he treats it as “five more minutes.” As the clock moves through 8:00, 8:30 and 9:00 PM, he becomes completely absorbed in the phone and loses track of time. The turning point comes when he finally looks at his laptop and sees the unfinished work. His frustration turns into shock when he sees his screen-time information. This is the moment when he understands the effect of his own choices. Rather than blaming anything else, he takes action by switching off the phone and putting it away.

In the final part of the film, the protagonist becomes calm and focused again. He completes the work and ends the film feeling satisfied, showing that the change in his behaviour was real and effective.

2.4 Message

The film “5 MORE MINUTES” conveys the message that small delays, when repeated, can become a serious waste of time. The protagonist does not decide to waste two hours; he only decides to spend a few minutes on his phone, and then a few more. The film shows that time is lost gradually and often without notice.

The film also shows that a distraction does not become dangerous because of its size, but because of how easily it is repeated. Each time the protagonist looks at his phone, the reason seems small. It is only the clock that reveals the total effect. At the same time, the film ends with a positive note. Once the protagonist decides to remove the distraction, he finishes the remaining work quickly. This shows that the work itself was not difficult; the delay was the real problem. The closing messages leave the audience with a simple reminder: “Don’t waste time waiting for later.”

2.5 Use of the Phone and Digital Distraction

The phone plays an important role in the storytelling of “5 MORE MINUTES.” Instead of using dialogue, the film uses the phone to show temptation, habit, and loss of time.

The story begins with the phone lying quietly on the desk. Its first vibration interrupts the actor’s work and creates the first moment of temptation. The film then uses several types of shots to show how the phone gradually takes over his attention: a close-up of the phone vibrating, a shot of him choosing between the phone and the laptop, and a close-up of his thumb scrolling.

The screen-time scene near the end is especially important. It gives the protagonist, and the audience, a clear and honest view of how much time was spent on the phone. This makes the realization more powerful than a spoken explanation could. The film therefore uses the phone not only as a realistic part of the protagonist’s daily life, but also as a storytelling device that reveals his weakness, his regret, and finally his decision to change.

2.6 Symbolism of the Clock and the Phone

The Clock

The clock is the most important symbolic element in the film. It appears at the beginning to establish the time (7:00 PM) and returns at 7:05, 7:30, 8:00, 8:30 and 9:00 PM. Each appearance gives the audience a clear measure of the time being lost. The quick-cut sequence of the clock at 8:00, 8:30 and 9:00 PM shows how quickly time passes when a person is distracted.

The Phone

The phone represents temptation and distraction. At first, it is only an object on the table. As the story develops, it becomes the reason for the unfinished work. When the protagonist switches it off and places it inside the drawer, the phone no longer controls him. This action symbolizes self-control and the decision to take back his time.

The Laptop

The laptop represents responsibility and purpose. Its screen shows the work at the beginning, the unfinished work after the delay, and the completed work at the end. It acts as a silent measure of the protagonist's progress throughout the film. Together, the clock, the phone, and the laptop form the main visual structure of the film: time passing, temptation, and responsibility.

2.7 Emotional Progression

The emotional progression of “5 MORE MINUTES” is communicated through the protagonist's facial expressions, body language, actions, pauses, and phone interactions. Since he is the only on-screen character, his performance carries most of the emotional development of the story.

Stage	Protagonist's Emotional State
Beginning (7:00 PM)	Calm and determined
Starting the work	Serious and focused
Phone vibrates	Curious and tempted
Looking between laptop and phone	Hesitant and conflicted
First scrolling (7:05 PM)	Distracted, then slightly guilty
Second distraction (7:30 PM)	Careless, followed by regret
Quick cuts (8:00 – 9:00 PM)	Completely absorbed and unaware
Seeing the unfinished work	Frustrated
Checking screen time	Shocked

Stage	Protagonist's Emotional State
Switching off the phone	Realizing and resolved
Finishing the work	Focused and determined
Ending	Relieved and satisfied

The progression begins with focus and determination. The first vibration introduces temptation, and each return to the phone makes the distraction longer. The emotional low point comes when the protagonist sees the unfinished work and his screen-time information.

From this point, the mood changes. The protagonist becomes quiet and thoughtful, and then determined. The final sequence gives a sense of relief, completing the emotional journey from focus → temptation → distraction → regret → distraction again → frustration → shock → realization → determination → satisfaction.

CHAPTER 3

PRE-PRODUCTION

3.1 Script Development

The screenplay for “5 MORE MINUTES” was developed around the theme of procrastination and the way small delays become a large waste of time. The story was planned as a 3-minute short drama with a single actor, a single location, and no dialogue.

The screenplay is set at around 7:00 PM and is divided into seven scenes: Starting the Work, First Distraction, “5 More Minutes,” Time Passes, Realization, Finishing the Work, and Ending. Each scene has a clear time range and a numbered shot list, which makes the film easy to plan, shoot, and edit. In total, the script contains 41 shots. Since the film has no dialogue, the script relies entirely on visual storytelling. Close-ups of the clock, hands, phone, and laptop screen carry the information, while the actor’s reactions carry the emotion. The script also includes on-screen text at the end to state the moral clearly.

Special attention was given to the pacing of the story. The first two scenes are calm and short, the middle scenes gradually increase the sense of lost time, the quick cuts in Scene 4 speed up the rhythm, and the final scenes slow down again to give a sense of relief and closure.

3.2 Scene Planning

The scenes in “5 MORE MINUTES” were planned according to the time structure of the screenplay and the emotional progression of the protagonist. The major scenes were planned as follows:

1. **Starting the Work (0:00 – 0:35)** – The clock shows 7:00 PM. The actor enters his room, sits at the desk, opens the laptop, and begins working seriously. (Shots 1–7)
2. **First Distraction (0:35 – 1:05)** – His phone vibrates. After hesitating between the laptop and the phone, he starts scrolling. The clock shows 7:05 PM, and he puts the phone down and goes back to work. (Shots 8–13)

3. **“5 More Minutes” (1:05 – 1:40)** – He looks at the phone again and scrolls, with a close-up of his thumb. The clock shows 7:30 PM, and he realizes that time has passed. (Shots 14–19)
4. **Time Passes (1:40 – 2:10)** – Quick cuts show the clock at 8:00, 8:30 and 9:00 PM with the actor still distracted. He finally looks at the laptop and finds the work unfinished. (Shots 20–27)
5. **Realization (2:10 – 2:35)** – He opens his screen-time information, looks shocked, looks at the unfinished work, and switches the phone off. (Shots 28–32)
6. **Finishing the Work (2:35 – 2:55)** – He puts the phone inside a drawer, sits down, and works with full focus until he finishes and saves the work. (Shots 33–39)
7. **Ending (2:55 – 3:00)** – He closes the laptop, leans back, and looks satisfied. The camera moves away slowly, the closing text appears, and the film fades out. (Shots 40–41)

The scene planning was kept simple so that the entire film could be produced within one room. Since the actor is the only person on screen, particular attention was given to his movements, expressions, phone interactions, pauses, and continuity between shots. The clock inserts also act as transitions between the different stages of the story.

3.3 Locations

The film “5 MORE MINUTES” was planned using a single, easily accessible location so that the production could remain focused on the character and the story. The script specifies the location as a house, and the entire story takes place in the actor’s room.

The main areas used within the location are:

- **Room Entrance** – Used for the opening shot in which the actor enters his room.

- **Desk / Work Area** – The primary location where the actor works on the laptop, receives the phone vibration, scrolls on the phone, and finally completes his work.
- **Drawer** – Used in the scene in which the actor puts his phone away.

Using one location made it easier to maintain continuity and gave more time to camera framing, actor performance, sound, and editing. It also supports the theme of the film, as the actor's wasted evening happens in the same place where his work was waiting for him.

3.4 Cast and Crew

The film "5 MORE MINUTES" follows a simple production structure with a single on-screen actor. The limited cast allows the film to focus completely on the protagonist's actions, expressions, and interactions with the laptop, phone, and clock.

Badrish performs the role of the protagonist. His performance is communicated mainly through facial expressions, body language, and silent reactions. Sam sundar handled the cinematography, including the framing of close-ups, clock inserts, and the closing camera movement. Sam sundar is responsible for writing and directing the film, developing the screenplay, planning the shots, and guiding each scene.

The simple cast and crew structure made the production manageable while allowing greater attention to storytelling, camera framing, continuity, sound, and editing.

3.5 Production Planning

The production of "5 MORE MINUTES" was planned around a simple storyline, a single on-screen actor, and one location. The planning focused on maintaining continuity in the desk area and on ensuring that the actor's emotional progression and the passage of time were clearly captured.

The shots were arranged according to the numbered shot list in the screenplay. Particular attention was given to the props involved in the story: the laptop, the phone, the clock, the desk, and the drawer. Since these objects appear repeatedly, their positions had to remain consistent between shots.

Special planning was required for the clock shots. The times 7:00, 7:05, 7:30, 8:00, 8:30 and 9:00 PM had to be shown clearly and in the correct order. The phone screens for the scrolling, screen-time, and vibration shots were also prepared in advance so that they would be readable on camera.

The production planning also included the use of sound effects such as the phone vibration, keyboard typing, and background sound, to support the emotional progression of the film. Since the film relies on visual storytelling and a single actor, careful planning of expressions, pauses, and timing was important for presenting the story within the 3-minute duration.

CHAPTER 4

PRODUCTION

4.1 Shooting Process

The shooting of “5 MORE MINUTES” was carried out according to the planned screenplay and shot list. The production focused on capturing the actor’s evening at his desk and gradually showing his changing emotional state through his actions and expressions.

All scenes were filmed within the house, using a simple setup suitable for a single-actor short film. Different shots were recorded for the important moments: the clock, the actor entering the room, the laptop screen, the close-up of typing hands, the phone vibrating, the thumb scrolling, the screen-time information, the phone being put into the drawer, and the final shot moving away from the actor. Particular attention was given to continuity of the actor’s position, the phone and laptop placement, props, and camera framing between shots. Multiple takes were recorded whenever necessary to obtain natural expressions and performances.

The sequence in which the actor moves from hesitation to distraction and from frustration to shock required careful timing. The shooting therefore focused on capturing these changes clearly through facial expressions, body language, pauses, and camera shots.

4.2 Camera

The short film “5 MORE MINUTES” was shot using a smartphone camera. A smartphone provided a convenient and accessible setup for capturing the different shots of the film while maintaining good image quality.

The camera was used to capture a variety of shot types: close-ups of the clock, hands, thumb, and face; medium shots of the actor at his desk; over-the-shoulder views of the laptop screen; and a final shot in which the camera slowly moves away from the actor. This variety of framing helps the audience follow the story without dialogue. Close-ups were used for the most important details, such as the clock time, the phone screen, and the actor’s face, while wider shots were used to show the actor in his

environment. Care was taken to keep the framing stable and consistent and to maintain continuity between shots.

4.3 Lighting

The short film “5 MORE MINUTES” was filmed using the available room lighting at the shooting location. No additional professional lighting equipment was used. Since the story is set at around 7:00 PM and continues into the evening, the lighting was kept simple and natural to match the everyday atmosphere. The room lighting, and the light from the laptop and phone screens, added to the realistic look of an evening of work. Care was taken to maintain reasonably consistent lighting between the different shots, particularly for the close-ups of the actor’s face and hands.

4.4 Audio

“5 MORE MINUTES” has no dialogue. Its audio was therefore planned to support the realistic and emotional tone of the film through sound effects and ambient sound rather than speech.

The main audio elements include the sound of typing on the keyboard, the phone vibration, the sound of scrolling and screen interactions, the phone being switched off, the drawer closing, and the quiet background sound of the room. The phone vibration is especially important because it is the sound that first interrupts the actor’s focus.

The sounds were carefully arranged so that they reinforce the story. Typing sounds create a feeling of focus at the beginning and again at the end, while the absence of typing during the distraction shows how the work has stopped. Moments of silence were used to add weight to the actor’s realization.

4.5 Direction

The direction of “5 MORE MINUTES” focused on presenting the protagonist’s journey through simple actions, expressions, and visual storytelling. Since the film has only one on-screen character and no dialogue, particular attention was given to his facial expressions, body language, and reactions in every scene.

The direction aimed to gradually change his emotional state from focused and determined to tempted, distracted, regretful, shocked, and finally resolved and satisfied. His hesitation in front of the laptop and phone, his glances at the clock, and his reaction to the screen-time information were directed carefully so that the audience could understand his feelings without any spoken explanation.

The clock and the phone were treated as key visual elements, and each clock shot was directed to show the correct time clearly. Special attention was also given to the ending. The contrast between the wasted evening and the quick, focused completion of the work was intentionally emphasized through the calm final shot, the slow movement of the camera away from the actor, and the closing text messages.

CHAPTER 5

POST-PRODUCTION

5.1 Video Editing

The short film “5 MORE MINUTES” was edited using video editing software. The editing process focused on arranging the recorded footage according to the screenplay and maintaining a smooth flow between the seven scenes.

The footage was trimmed and arranged to match the time structure of the script, so that each scene fits within its planned duration and the total runtime stays close to three minutes. Particular attention was given to the clock inserts, the phone scrolling shots, the screen-time scene, and the final work sequence, as these moments are important to the development of the story.

The quick-cut sequence in Scene 4 was edited with a faster rhythm to give the feeling of time slipping away. The alternating shots of the clock (8:00, 8:30 and 9:00 PM) and the actor using his phone were cut together so that the audience feels the passing of time within a few seconds. The editing also involved synchronizing the sound effects with the corresponding visuals, and adding the closing on-screen text and the final fade out.

5.2 Sound and Music

Sound was used in “5 MORE MINUTES” to support the emotional progression of the story and to make each scene more engaging. Since there is no dialogue, sound effects play a larger role than they would in a conventional film.

The phone vibration was used to signal the start of each distraction, and the typing sounds were used to show the actor’s focus. The balance between these two sounds helps the audience understand the change in his attention without needing any explanation. Ambient room sound and moments of silence were used to add realism and to give weight to the key emotional moments, especially the actor’s reaction to the unfinished work and the screen-time information. Sound effects and silence were combined during post-production to support the film’s realistic and reflective atmosphere.

5.3 Colour Correction

Colour correction for “5 MORE MINUTES” was carried out during the post-production process. The main purpose of colour correction was to maintain a consistent visual appearance across the different shots recorded using the smartphone camera.

Adjustments were made where necessary to brightness, contrast, exposure, and overall colour balance so that all the shots appeared visually consistent. Particular attention was given to the clock inserts and the phone and laptop screens, because these needed to be clearly readable.

The colour treatment was kept natural and realistic to match the everyday theme of the film. The visual tone was maintained throughout so that the audience could focus on the actor’s performance and the passage of time without excessive colour effects.

5.4 Titles and Final Presentation

The final presentation of “5 MORE MINUTES” was designed to maintain a simple and clean visual style that matches the tone of the film. The closing on-screen messages are an important part of the presentation, as they state the moral of the film clearly.

The final text sequence appears over the last shot as the camera slowly moves away from the actor. It begins with “Five minutes doesn’t feel like much.”, followed by “Until those five minutes become hours.”, and ends with the final message, “Don’t waste time waiting for later.” The film then fades out.

The final edited sequence was reviewed to ensure that the scenes, clock times, transitions, sound effects, and text were arranged in the correct order. The final film was presented as a 3-minute short film, combining the screenplay, acting, cinematography, sound, and editing into a single continuous narrative. The presentation was kept minimal and natural to support the film’s central message about time and distraction.

CHAPTER 6

CONCLUSION

6.1 Final Outcome

The short film “5 MORE MINUTES” was completed as a 3-minute short drama focusing on procrastination and the way small delays can turn into a big waste of time. The film follows a young man through one evening in which a few minutes of phone scrolling become two hours of lost time, until he decides to switch off his phone and finish his work.

The film successfully combines acting, cinematography, sound, and editing to present the protagonist’s journey without any dialogue. The use of a single on-screen actor and a single location allowed the production to remain simple while keeping the focus on the story.

The clock shots, the phone interactions, and the closing text messages work together to communicate the message clearly. The contrast between the wasted evening and the quick completion of the work after the phone is put away provides a satisfying ending that reinforces the central idea of the film.

Overall, the completed film demonstrates how a simple location, an everyday situation, visual storytelling, and effective use of sound and editing can be combined to create a meaningful short film within a limited duration.

6.2 Challenges Faced

Several challenges were encountered during the production of “5 MORE MINUTES.” Since the film features a single character and no dialogue, particular attention had to be given to performance, continuity, camera framing, and timing.

Performance and Expressions:

As there is no dialogue, the actor’s emotions had to be communicated through facial expressions, body language, and reactions. Showing the gradual change from focus to temptation, regret, shock, and determination required careful performance and multiple takes.

Continuity of Time:

The clock is the main storytelling device, so the times shown (7:00, 7:05, 7:30, 8:00, 8:30 and 9:00 PM) had to be accurate and in the correct order. The positions of the laptop, phone, and other props also had to remain consistent between shots.

Showing Time Passing:

Showing two hours of lost time in a three-minute film was difficult. The quick-cut sequence in Scene 4 needed careful planning and editing so that it felt natural and understandable.

Screen Shots:

The phone and laptop screens had to be clearly visible and readable on camera, particularly for the scrolling, screen-time, and work-progress shots. Screen brightness and reflections needed to be controlled.

Limited Production Setup:

The film was shot using a smartphone camera and the available location and lighting. This required careful planning of camera positions, framing, and lighting conditions to maintain consistent footage.

Editing:

The footage had to be carefully arranged and timed. Particular attention was given to the timing of the clock inserts, the sound effects, the quick cuts, and the closing text so that the intended emotional impact was maintained.

6.3 Learning Outcomes

The making of “5 MORE MINUTES” provided practical experience in different stages of the filmmaking process. The major learning outcomes from the project include:

- Understanding how an original idea can be developed into a short-film screenplay with a clear shot list.
- Learning how to structure scenes and maintain a clear beginning, middle, and ending within a limited duration.
- Gaining practical experience in acting and directing a single-character, no-dialogue film.

- Understanding the importance of facial expressions, body language, and visual storytelling in communicating emotions.
- Learning how props such as a clock, phone, and laptop can be used as symbols to tell a story.
- Learning basic camera framing and shot composition, including close-ups, medium shots, and camera movement.
- Understanding the importance of continuity between different shots and scenes.
- Gaining experience in using sound effects, ambient sound, and silence to support a story.
- Learning video editing techniques such as trimming, quick cuts, timing, text overlays, and fade transitions.
- Understanding basic colour correction and maintaining visual consistency between shots.
- Understanding how simple locations and limited resources can be used effectively in short-film production.
- Developing skills in storytelling, planning, time management, and creative problem-solving.

6.4 Overall Conclusion

The making of “5 MORE MINUTES” provided practical experience in developing and presenting a short-film narrative from an original idea. The project explored the theme of procrastination and digital distraction through a simple and relatable story about one evening of work.

The film demonstrated how screenplay writing, acting, cinematography, direction, sound, and video editing can be combined to communicate a message within a limited duration. The use of a clock, a phone, and a laptop as visual elements helped convey the protagonist’s changing state without relying on any dialogue.

The project was completed using a simple production setup with a single location and a single on-screen actor. This allowed greater focus on performance, visual

storytelling, continuity, camera composition, and editing. The post-production process further provided practical experience in arranging footage, synchronizing sound, applying colour correction, and creating the final presentation.

Overall, “5 MORE MINUTES” demonstrates that an effective short film can be created with accessible equipment and a simple location when the story, performance, visual presentation, sound, and editing work together effectively. Its message is simple: five minutes may not feel like much, but small delays can quickly become a big waste of time.
